Preface

This document provides descriptions of the interfaces, pin assignments, and specifications of CYW20736S Bluetooth Low Energy (BLE) System-in-Package (SiP) module. It is intended for designers who are responsible for adding the CYW20736S module to wireless input devices including heart-rate monitors, blood pressure monitors, proximity sensors, temperature sensors, and battery monitors..

Cypress Part Numbering Scheme

Cypress is converting the acquired IoT part numbers from Broadcom to the Cypress part numbering scheme. Due to this conversion, there is no change in form, fit, or function as a result of offering the device with Cypress part number marking. The table provides Cypress ordering part number that matches an existing IoT part number.

Broadcom Part Number	Cypress Part Number
BCM20736	CYW20736
BCM20736S	CYW20736S

1. Introduction

1.1 Overview

The CYW20736S is a compact, highly integrated Bluetooth low energy (BLE) system-in-package (SiP) module. The CYW20736S SiP includes an embedded BLE antenna, 24 MHz clock, and 512 Kb EEPROM, so only a minimal set of external components is needed to create a standalone BLE device.

The CYW20736S is designed to accelerate time to market. The Bluetooth stack and several application profiles are built into the module, allowing customers to focus on their core applications. To further reduce application development time, the CYW20736S includes integrated software support, with one-click installation of the complete environment and a one-click compile/build/link/load cycle. All this, coupled with an ultrasmall form factor and support for a wide voltage range, makes the CYW20736S well suited for virtually any Bluetooth Smart application.

1.1.5   32.768 kHz Oscillator

The CYW20736S includes a standard Pierce oscillator. The oscillator circuit includes a comparator with hysteresis on the output to create a single-ended digital output. The hysteresis eliminates chatter when the input is near the comparator threshold (~100 mV). The oscillator circuit can is designed for a 32 kHz or 32.768 kHz crystal oscillator, and can also be driven by an external clock input with a similar frequency. Characteristics for a 32 kHz oscillator are defined in Table 1-1.

Type C	0.4 × 0.4	0.5 × 0.5	

1.7.2 PCB Layout Recommendations

The following layout recommendations are referenced to Figure 1-8.

■ Connect to system ground from side D of the module (pins 13–22).

■ The L-shaped ground plane is required for the embedded BLE antenna. Keep the GND continuous. Do not cut off the GND shape to accommodate trace routes.

■ An L-shaped ground plane is required. If the L-shaped GND plane is located on the top layer of the PCB, do not place components on the ground plane. If this cannot be avoided, move the L-shaped ground plane to another layer.

■ Antenna efficiency of 31–41% can be achieved based on the layout in Figure 1-8 and the dimensions listed below. Following these layout recommendations is expected to yield 50+ meters of usable range; deviating from these recommendations may reduce the range of the antenna.

  ❐ D: 4.5 mm (typical)

  ❐ G, H, S: 3 mm (typical)

  ❐ L: 3 mm (minimum)

  ❐ W: 0.4 mm (typical)

■ Route signal traces out of the module from side C (between pins 27 and 30) or side D (between pins 16 and 19) of the module. Traces can be overlapped to avoid routing through the keep-out area.
■ Do not route traces from side A or side B.
